

PHP Tutorial

PHP Tutorial

Welcome to PHP Tutorial by TutorialKart!

PHP is a scripting language that is mostly used for web development.

This tutorial presents you a set of PHP Tutorials to get started with PHP basics and concepts.

PHP Tutorials – Basic Concepts

- PHP Datatypes
 - [PHP Boolean](#)
 - [PHP Integer](#)
 - [PHP Float](#)
 - [PHP String](#)
- [PHP Array](#)
- [PHP Class](#)

PHP Conditional Statements

- [PHP If](#)
- [PHP If Statement with AND Operator](#)
- [PHP If Statement with OR Operator](#)
- [PHP If Statement with NOT Operator](#)

PHP Loops

- [PHP While Loop](#)
- [PHP For Loop](#)
- [PHP foreach](#)

PHP Tutorials on Array

- [PHP Array](#)
- [PHP Create Array](#)
- [PHP Indexed Arrays](#)
 - [Access Array Elements using Index](#)
- [PHP Associative Arrays](#)

- [PHP Associative Arrays](#)
- [PHP 2D Array](#)
- [PHP Multi-dimensional Arrays](#)
- [PHP String Array](#)
- [PHP Array foreach](#)
- [PHP Array – Notice: Undefined offset: 0](#)
- [PHP Array count\(\)](#)

The following tutorial provides you the complete list of PHP Array Functions.

[PHP Array Functions](#)

[PHP Tutorials on Strings](#)

String is a collection of characters. You may need to manipulate these strings or know about some of the properties of a given string, in your application.

Following PHP Tutorials on Strings will cover most of the scenarios on Strings in PHP, a developer may face.

- [PHP String Tutorial](#)
- [PHP – How to Count Number of Words in String?](#)
- [PHP – How to Reverse a String?](#)
- [PHP – How to Loop through Characters in String?](#)
- [PHP – How to Split String into Words?](#)
- [PHP – Loop through Words in String](#)
- [PHP – How to Check if String is Empty?](#)
- [PHP – How to Check if String is Float?](#)
- [PHP – How to check if String contains Number\(s\)?](#)
- [PHP – How to Check if String Ends with Slash \(/\)?](#)
- [PHP – How to Count Alphabets in a String?](#)
- [PHP – How to Concatenate Strings?](#)
- [PHP – How to Check if String Ends with Punctuation?](#)
- [PHP – How to Check if String Ends with Substring?](#)
- [PHP – How to Check if String Starts with Lowercase Alphabet?](#)
- [PHP – How to Check if String Starts with Uppercase Alphabet?](#)
- [PHP – How to Check if String is Number?](#)
- [PHP – How to Check if String Starts with Number?](#)
- [PHP – How to Check if String Starts with Character?](#)
- [PHP – How to Check if String Starts with http?](#)
- [PHP – How to Check if String Starts with Substring?](#)
- [PHP – How to Compare Two Strings?](#)
- [PHP – How to Prepend String?](#)
- [PHP – How to Append String?](#)
- [PHP – How to Count Occurrences of Substring in String?](#)
- [PHP – How to Check if String Contains Specific Word?](#)

PHP String Conversions

The following PHP Tutorials explain how we can convert string content to other datatypes like int, float, bool, etc., and vice-versa.

- [PHP – How to Convert String to Int?](#)
- [PHP – How to Convert String to Float?](#)

PHP String Built-in Functions

- `implode()`
- `sprintf()`
- `sscanf()`
- `strpos()`
- [PHP `strlen\(\)`](#) – String Length
- `strstr()`
- `strtolower()`
- `strtoupper()`
- `substr()`
- `trim()`

Conclusion

In this tutorial, we learned about PHP and different concepts in PHP.
